

NALAIYA THIRAN

ASSIGNMENT-2

USER CASE: PERSONAL ASSISTANCE FOR SENIORS WHO ARE SELF RELIANT

BY TEAM LEAD: KAVIPRIYA.K.S

Build a python code, Assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature

CODE:

"Let us consider normal temperature=30 Celsius and normal humidity=40%"

```
import random
```

```
Temperature=random.randint(1,100)
```

```
Humidity=random.randint(1,100)
```

```
print(Temperature)
```

```
print(Humidity)
```

```
if((Temperature>30)&(Humidity>40)):
```

```
    print("Temperature and Humidity are HIGH!!! ")
```

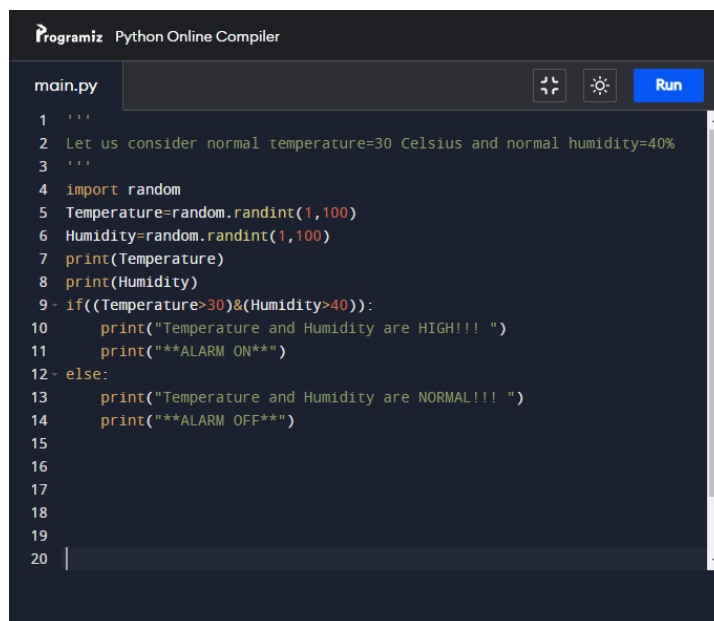

```
    print("**ALARM ON**")
```

```
else:
```

```
    print("Temperature and Humidity are NORMAL!!! ")
```

```
    print("**ALARM OFF**")
```

OUTPUT:

A screenshot of a web-based Python compiler interface. The title bar reads "Programiz Python Online Compiler". Below the title bar, there is a tab labeled "main.py" and a "Run" button. The code is displayed in a dark-themed editor with line numbers from 1 to 20. The code implements a random number generator for temperature and humidity, followed by an if-else statement to check for high values and trigger an alarm. The output of the program is visible in a separate pane on the right, showing the generated temperature and humidity values and the resulting alarm status.

```
1 '''
2 Let us consider normal temperature=30 Celsius and normal humidity=40%
3 '''
4 import random
5 Temperature=random.randint(1,100)
6 Humidity=random.randint(1,100)
7 print(Temperature)
8 print(Humidity)
9 if((Temperature>30)&(Humidity>40)):
10     print("Temperature and Humidity are HIGH!!! ")
11     print("**ALARM ON**")
12 else:
13     print("Temperature and Humidity are NORMAL!!! ")
14     print("**ALARM OFF**")
