

# NALAIYA THIRAN

## ASSIGNMENT-2

**USER CASE: PERSONAL ASSISTANCE FOR SENIORS WHO ARE SELF RELIANT**

**BY TEAM MEMBER 1: ISHRATH BEGUM.I**

**Build a python code, Assume you get temperature and humidity values (generated with random functions to a variable) and write a condition to continuously detect alarm in case of high temperature**

**CODE:**

"Let us consider normal temperature=30 Celsius and normal humidity=40%"

```
import random
```

```
Temperature=random.randint(1,100)
```

```
Humidity=random.randint(1,100)
```

```
print(Temperature)
```

```
print(Humidity)
```

```
if((Temperature>30)&(Humidity>40)):
```

```
    print("Temperature and Humidity are HIGH!!! ")
```

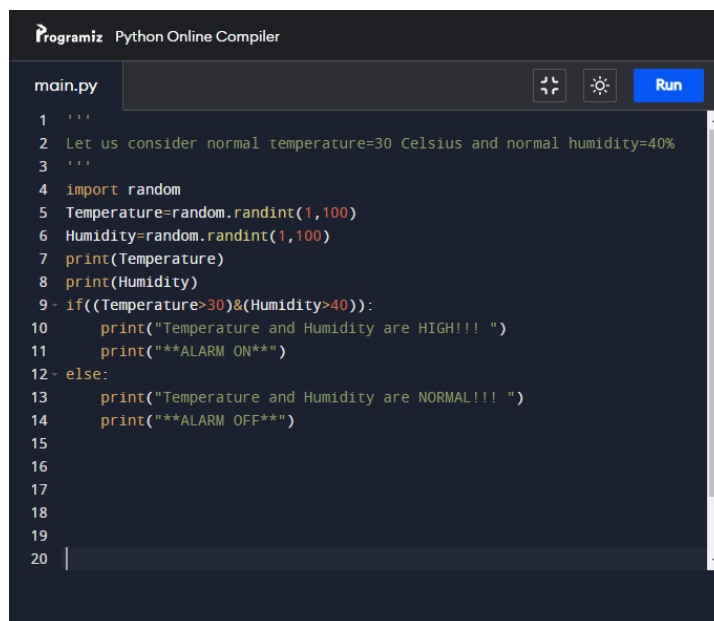

```
    print("**ALARM ON**")
```

```
else:
```

```
    print("Temperature and Humidity are NORMAL!!! ")
```

```
    print("**ALARM OFF**")
```

**OUTPUT:**

The screenshot shows a web-based Python compiler interface. At the top, it says "Programiz Python Online Compiler". Below this, there's a tab labeled "main.py". The code is written in a dark-themed editor. The code includes comments, imports the random module, generates random temperature and humidity values, and uses an if-else statement to print "ALARM ON" or "ALARM OFF" based on the values. The output area on the right shows the results of the code execution.

```
main.py
1  '''
2  Let us consider normal temperature=30 Celsius and normal humidity=40%
3  '''
4  import random
5  Temperature=random.randint(1,100)
6  Humidity=random.randint(1,100)
7  print(Temperature)
8  print(Humidity)
9  if((Temperature>30)&(Humidity>40)):
10     print("Temperature and Humidity are HIGH!!! ")
11     print("**ALARM ON**")
12  else:
13     print("Temperature and Humidity are NORMAL!!! ")
14     print("**ALARM OFF**")
